We made color visible for hundreds of salons.

Now we're building Salon AI.

170+ SALONS / $130K ARR / 12 COUNTRIES / 500+ PROFESSIONALS / 34.0M GRAMS MEASURED

It started with one problem inside the salon.

Spectra began with a very specific problem inside the salon: professional color. It is one of the largest material costs in the business, and almost none of it was measured at the point of service.

So we built a system that could see the service itself: the formula, the product, the shade, the grams, the client and the cost. Salons adopted it, and it spread across countries.

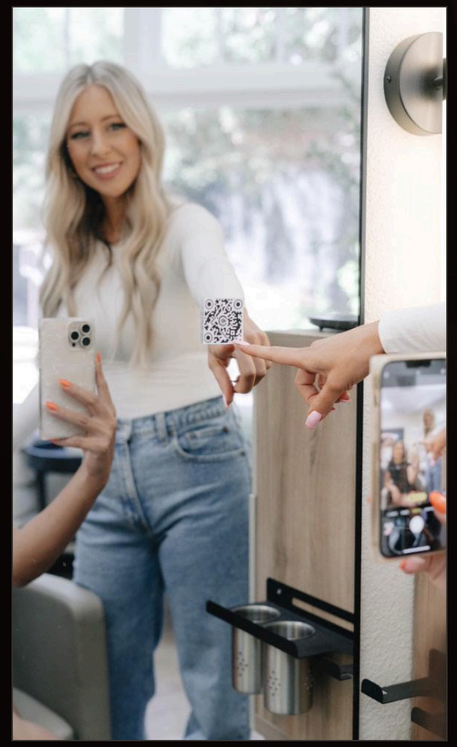

Every service quietly created something we had not planned for at the beginning: **a structured record of what actually happened inside the work**.

That record is what changed our view of what Spectra could become.

Spectra was born inside the salon, not inside a software company.

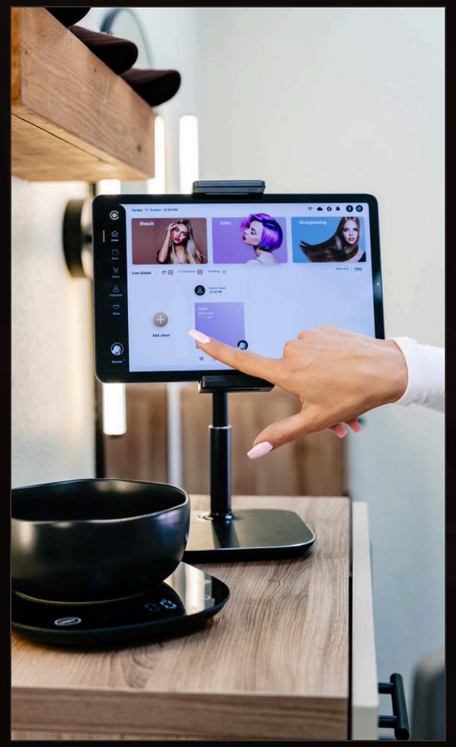

So we built Color Intelligence.

Spectra Operational Data Layer

BRANDS / SUPPLIERS

Consumption · Usage by service · Demand · Adoption · Portfolio

Value for both sides of the industry.

Salons are the operating customer. Brands are the intelligence customer we are beginning to validate.

THE PLATFORM

What do we bring that is actually new?

Not another dashboard that explains what happened. A system that understands, recommends, and gradually acts.

Smart scheduling

Understands demand, time, skills and profitability.

Client memory

Formulas, history and preferences in one place.

Team assistant

Workload, performance and team recommendations.

Autonomous inventory

Predicts consumption, exceptions and reorders.

Profit engine

Cost and profitability in real time.

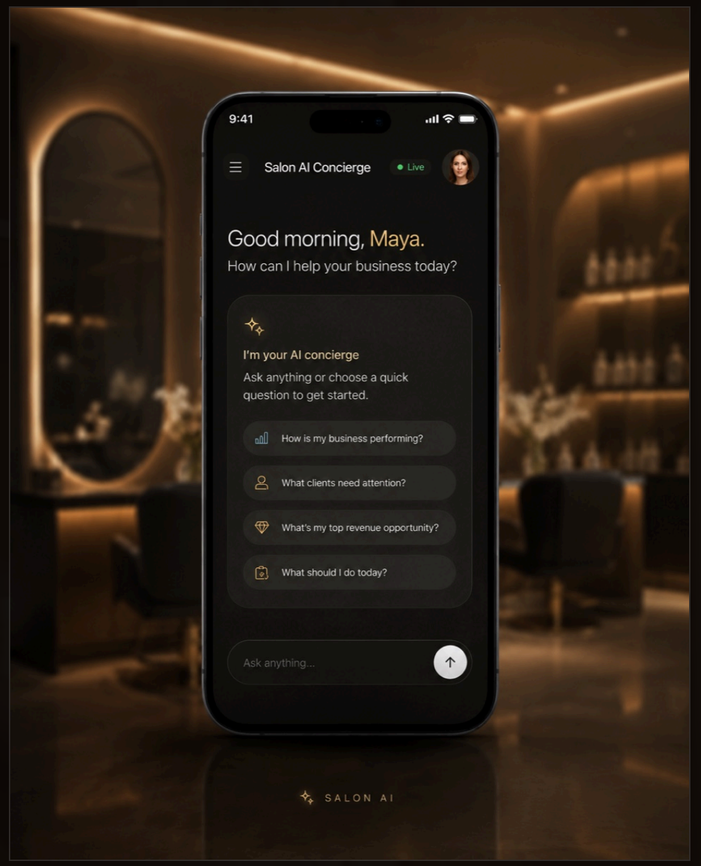

Owner agent

Summaries, exceptions and actions for the owner.

We started by measuring one bowl of color.

Bowl → Service → Data → Intelligence → Autonomous salon

Spectra is building the operating and data layer for professional beauty.

Too early before AI could act. Ready now.

THEN	NOW	SPECTRA TODAY
Salon systems mainly recorded transactions.	AI can reason across operational context and take actions.	Real workflow penetration. Historical service data. Existing customers.

AI can now act on operational context. Spectra already has physical execution data.

Finish Salon OS and Salon AI.	Deploy the existing salon base.	Restart acquisition.	Brand-intelligence infrastructure.	Transition and execution.

Spectra has raised $1M+ to date. $1M at a $5M pre-money valuation ($6M post-money), subject to board, investor and legal approval. Advisory compensation includes performance-linked and equity components. Forward-looking milestones depend on product, adoption and market conditions.

STRATEGIC EXIT

Several strategic buyers could value the layer we are building.

PROFESSIONAL BEAUTY

Salon consumption and behavior.

SOFTWARE

Service execution.

DISTRIBUTION

Replenishment.

DATA

Beauty data layer.

The value sits at software, workflow, consumption and industry data.

One gram of color.

That gram became a formula. The formulas became hundreds of thousands of real service events. The events became an operating data layer. And that layer is becoming Salon AI.

Now we’re building the rest.

With appreciation,

Maor Ganon and Elad Gotlieb
