MAOR GANON · FOUNDER & CEO

The bigger my salon became, the more expensive the blind spot became.

I learned professional color in Paris, managed color rooms, and later built and operated my own salon business.

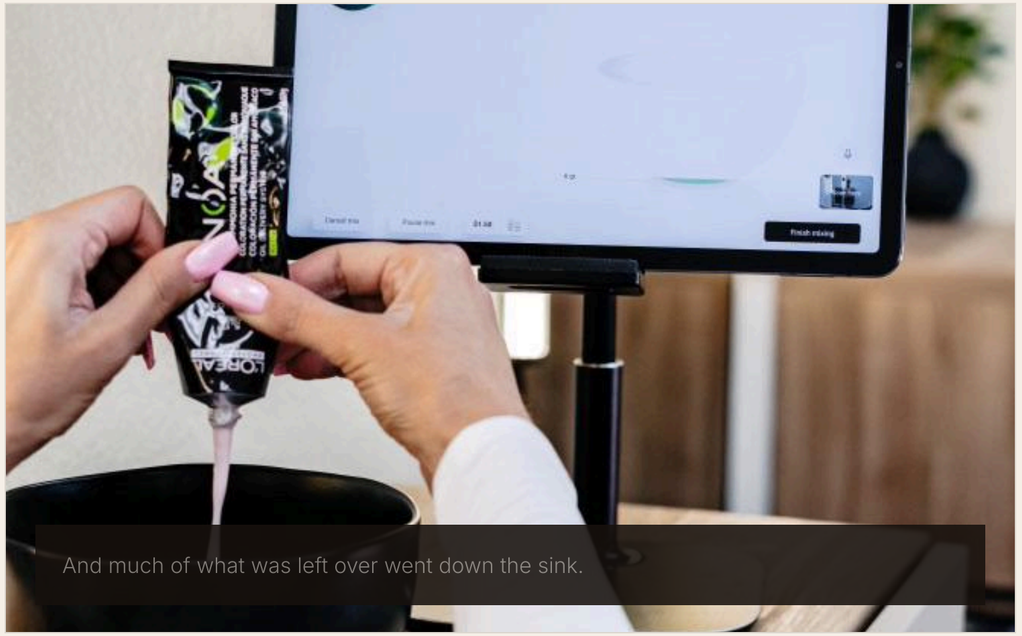

Inside the salon, before Spectra.

Growth made the blind spot more expensive.

This is the founder story behind Spectra.

THE ORIGIN

One extra bowl did not look important.

And much of what was left over went down the sink.

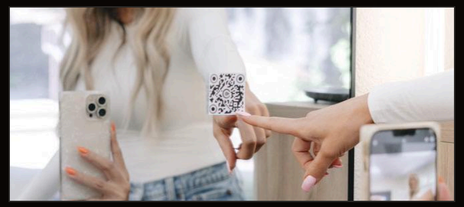

VISIBLE	I could see what we purchased.
VISIBLE	I could see what we charged.
THE BLIND SPOT	*But I could not clearly see what each service actually consumed or truly cost.*

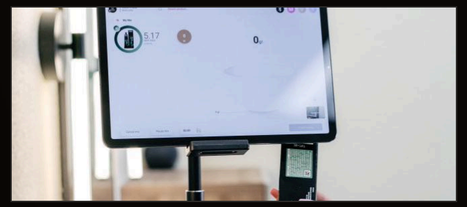

As the business grew, more professionals mixed more formulas, more services happened at the same time, and more expensive material moved through the salon every day. Professionals often mixed a little extra because running out during a service was worse than mixing too much. Across hundreds of services, employees and months, it became real money.

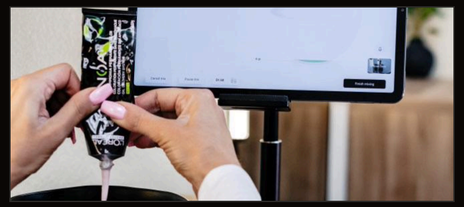

THE FIRST SOLUTION

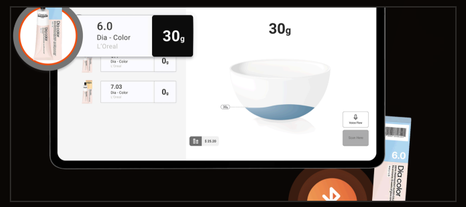

So we measured the work, not just the transaction.

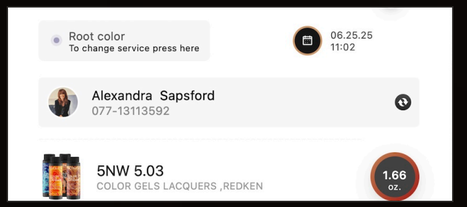

Spectra follows the color service while it happens. The real cost and inventory movement are recorded. For the salon, the result is simple:

Client · Scan · Mix · Measure · Record

Less waste.
Better margin.
Better control.

PROOF

We proved salons would use it, pay for it and buy it remotely.

Spectra did not stay in a prototype environment. It became part of the real workflow. More than one hundred and seventy salons and more than five hundred professionals have used the system across twelve countries.

170+ SALONS / 12 COUNTRIES / 500+ PROFESSIONALS / ~$479K REVENUE TO DATE

$40K Marketing → 1,476 Leads → 301 Trials → 96 Paying salons · Historic ~$300 · Target < $150 TARGET — NOT YET PROVEN

AI does not create our go-to-market from zero.
It can make a proven motion dramatically more efficient.

WHAT THE WORK CREATED

Every service quietly became history.

Every time Spectra was used, it captured more than a measurement.

One service became one structured operational record.

Today, that history includes more than six hundred and seventeen thousand measured color services, more than thirty-four million grams of material and more than five hundred and sixteen thousand client visits.

Spectra knows what was actually done.

Client · Professional · Service · Formula · Product · Grams · Time · Cost
→ One service record

617K+

MEASURED COLOR SERVICES

34M+	Grams measured
516K+	Client visits
228	Brands observed
44	Months of history

MANUFACTURER / DISTRIBUTOR	What shipped
POS	What sold
BOOKING	What was scheduled
SPECTRA	What was actually done

Software can be rebuilt.
History has to be earned.

The bowl taught us how the service really works.

A booking system sees an appointment from start to finish. But a salon service does not work like one solid block of time. Spectra entered the workflow deeply enough to understand those moments.

Diagnosis → Mix → Apply → **Process** → Rinse → Finish

Professional working · Client processing / professional available

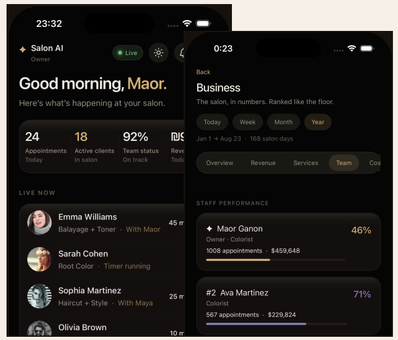

The service cycle is the missing layer between booking and execution.

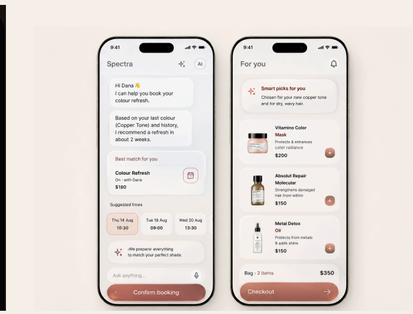

That is why the same knowledge that helped us understand a bowl of color can also help us build a much smarter calendar.

THE NEXT PRODUCT

We already have the network we need to build Salon AI.

We do not plan to ask salons to trust an autonomous AI on day one. The next step is to give our existing salon network Salon OS first, without the autonomous AI layer. Salon OS connects everyone around the salon. Then we combine the two.

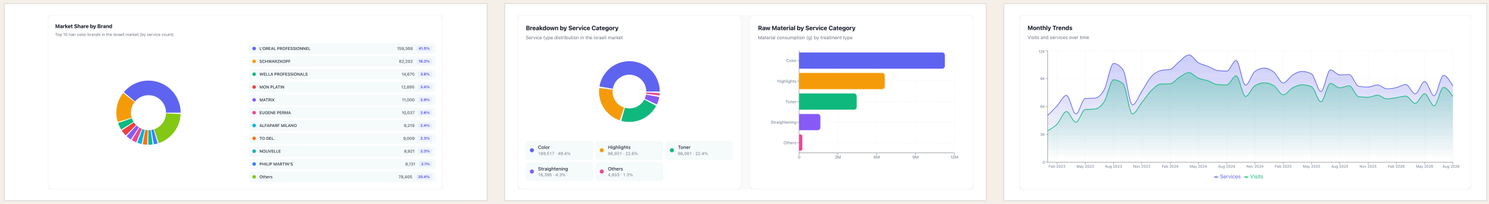

We do not need to imagine how salons operate.
We can learn from them.

Salon OS behavior + Spectra service history → Salon AI
Real salon operations + real execution history = the foundation for Salon AI.

L’Oréal Israel came to us because the data was different.

Professional beauty companies know what they manufacture. But once the product enters the salon, much of the visibility disappears. Sell-in is not consumption. L’Oréal Israel approached Spectra because they understood that our data was unique. Spectra could show real professional usage rather than only shipments or sales.

Consumption · Usage by service · Adoption signals

Annual intelligence subscriptions can scale from global beauty groups to national brands and local professional distributors.

The same data that helps a salon operate better
can help the industry understand the market better.

Two enormous economies meet inside one salon.

On one side is a global salon-services market worth approximately two hundred and sixty-five billion dollars today and expected to grow beyond five hundred and twenty billion dollars over the coming decade.

On the other side is approximately one hundred and twenty-nine billion dollars of salon-grade beauty and personal-care products, also growing strongly.

These markets should not simply be added together as one TAM.

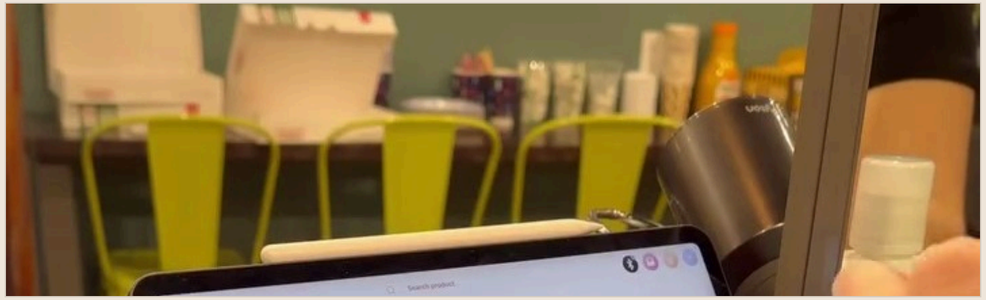

The point is that every salon sits directly between the services it sells and the professional products it consumes.

Spectra sits inside that exchange.

SALON SERVICES

≈$265B

≈$523B by 2034

PROFESSIONAL BEAUTY PRODUCTS

≈$129B

≈$222B by 2033

Spectra sits where service revenue meets professional product consumption.

Salon software alone has already created billion-dollar companies.

Zenoti — approximately $1.5B valuation · Fresha — more than $1B valuation · Mangomint — $35M Series B

Sources: Fortune Business Insights, Salon Services (2025–2034); Grand View Research, Salon Beauty & Personal Care Products (2025–2033). Hair segments are not additive TAM.
Zenoti last known valuation from the 2021 TPG Series D extension. Fresha $1B+ from the May 2026 KKR investment. Mangomint $35M Series B announced in 2024.

The operating system can become the commerce layer.

Once Spectra knows the client, the service, the inventory and what was actually consumed, commerce becomes a natural extension of the workflow. Spectra already knows what was consumed. At sufficient density inside a defined market, it can know what is running low and turn that shortage into an order with one click. The salon remains at the center of the client relationship.

Industry → Salon → Client

Software · Intelligence · Commerce

Spectra connects how the salon operates, what the industry sells to it, and what the salon sells to its clients.

We know the workflow. We have the history. Now we need to prove the platform.

$1M

$5M PRE-MONEY VALUATION

Finish · Deploy · Restart growth

Maor Ganon built his career inside professional salons, including working in Paris and managing color rooms.

He later built and operated his own salon business, where the operational pain that became Spectra grew with the company.

Elad Gotlieb brings international operating and commercial experience. Before Spectra, he led Asia operations and market expansion at Secret.

Achela leads Spectra's engineering, platform and AI development.

Maor Ganon
Founder & CEO · Salon operator

Elad Gotlieb
Co-Founder · Global operations

The goal of this round is simple: prove that the wedge can become the platform.

If we prove that transition, Spectra can become strategically relevant to professional beauty groups, salon software companies, distributors and data businesses.

Yoav Horovitz, Investor & Board · Brian Cooper, Early Investor / Board Observer · Roy Gefen, GTM Advisor · Aquilo, Strategy & Growth · Oren Revach, Chairman, Estée Lauder Companies Israel · Paul Hagag, Data Advisor, L'Oréal

Oren, Paul and Aquilo contribute expertise and are not investors in the company.

Spectra has raised $1M+ to date. $1M at a $5M pre-money valuation ($6M post-money), subject to board, investor and legal approval. Advisory compensation includes performance-linked and equity components. Forward-looking milestones depend on product, adoption and market conditions.

WHERE WE STARTED

One gram of color.

That is where the story started.

One gram became part of a formula.

The formula became a service.

The services became hundreds of thousands of real operational records.

Those records became history.

The history became a data layer.

And now that data layer can help operate the salon, inform the professional beauty industry and eventually power commerce.

We started by making color visible.

Now we’re building the rest.

The operating, intelligence and commerce layer for professional beauty.
