

Validated Market

Salon and beauty-tech software has already produced billion-dollar outcomes. The category is proven, but the next layer is still open: production data, AI operations, and margin intelligence for salons.

KNOWN OUTCOMES

\$6.5B+

Private valuations + acquisitions, excluding Block

TOP OUTCOME

\$1.9B

Mindbody acquisition by Vista, 2019

UNICORN / NEAR

4

Mindbody, Zenoti, Vagaro, Boulevard

AI GAP

1/9

Only Zenoti shows serious AI depth

The investor read-through

Existing winners prove the market can support large outcomes. Most of them monetize scheduling, payments, CRM, marketing, or marketplace workflows. Spectra targets a deeper layer: salon production data that connects revenue, product cost, usage, waste, and AI decisions.

Funding & Valuation Benchmarks

COMPANY	VALUATION / OUTCOME	FUNDING	SCALE	AI
Mindbody	\$1.9B	Public historically; acquired private	130+ countries	Limited
Zenoti	\$1.5B	\$340M+ total	~30K businesses, ~50 countries	AI-first
Vagaro	\$1.0B	\$63M+ growth equity	250K+ professionals	None
Boulevard	\$800M	\$188M total, Series D 2025	Thousands of salons and spas	Embedded
Fresha	\$640M+	\$184M total	450K+ pros, 120+ countries	None
GlossGenius	\$510M	\$72M+ total, Series C 2023	Tens of thousands of professionals	Embedded
Booker	\$150M	\$77M raised pre-acquisition	Part of Mindbody network	Embedded
Square Appointments	Public	Square raised ~\$590M pre-IPO	Millions of sellers in Square ecosystem	Limited
Phorest	Undisclosed	EUR31M+ disclosed	Thousands of salons, 9 countries	Limited

Why Spectra Takes Share

Spectra starts at the place where salon value is created: colour production. From there it expands into inventory, ordering, calendar, checkout and AI operations.

01

Immediate ROI wedge

Lower waste, true cost per service, and automated ordering create a financial reason to adopt.

02

Measured data moat

Smart scale + workflow capture creates structured grams, formulas, timing and inventory data.

03

Expansion path

Start with colour, then expand into inventory, calendar, checkout, analytics and AI agents.

The Share Capture Loop

01

Start where value is created

Every colour mix creates grams, formula, timing, inventory movement, and service-margin data.

02

Measured data beats estimates

The smart scale captures real production events, not manual notes or generic POS categories.

03

Immediate ROI wedge

Waste reduction, true cost per service, and auto-ordering give owners a financial reason to switch.

04

Expansion into the OS

Once embedded in colour production, Spectra expands into inventory, calendar, checkout, and AI agents.

05

Compounding AI flywheel

More salons create more mixes; more mixes improve forecasting, recommendations, and retention.

Simple investor message

Competitors own the booking screen. Spectra can own the operational data layer that tells salons what each service costs, what to buy next, where waste happens, and how to improve margins.

The Gap In The Market

The incumbents are strong on table-stakes software, but weak where Spectra is strongest: salon-specific production data, AI-native decisions, and simple ROI for small and mid-market salons.

AI Depth Ranking

1	Zenoti		8/10 AI-first
2	GlossGenius		4/10 Embedded
3	Boulevard		4/10 Embedded
4	Booker		3/10 Add-on
5	Phorest		2/10 Limited
6	Square		2/10 Limited
7	Mindbody		2/10 Limited
8	Vagaro		0/10 None
9	Fresha		0/10 None

Market Pricing

SEGMENT	EXAMPLES	SIGNAL
SMB tools	Square, GlossGenius, Vagaro	Transparent, but shallow data
Marketplace	Fresha	Discovery-led, margin leakage
Enterprise	Zenoti, Mindbody	Powerful, complex, sales-led
Spectra wedge	Colour-heavy salons	ROI-first production layer

Spectra Positioning

AI-native from day one HairGPT turns appointments, client history, formulas, inventory, and usage data into daily recommendations.	Only hair data lake Smart-scale integration creates proprietary data competitors do not have: grams, formulas, costs, and product usage.
Cleaner pricing story No marketplace commissions, no heavy enterprise onboarding, and a clear ROI story around waste and margin.	Salon-specific depth Purpose-built for hair salons: colour management, product usage, formula history, and service economics.

The Data Competitors Don't Have

Spectra can become the market data layer for professional beauty: anonymised revenue, cost, usage, waste, inventory and trend signals from real salon workflows - not surveys, not estimates, not generic POS exports.

REVENUE LAYER

Service \$

Ticket value, service mix, client frequency

COST LAYER

COGS

Product cost, grams used, waste per service

USAGE LAYER

SKU

Brand/product consumption by salon type

TREND LAYER

Live

Color trends, demand shifts, regional signals

What Spectra Sees

01

Salon P&L signals

Revenue by service, product cost, margin leakage, discounting, inventory movement, and true cost per treatment.

02

Real product usage

Which colours, formulas, brands, and SKUs are actually consumed - measured in grams from the workflow.

03

Market trend data

Emerging colour trends, seasonality, regional demand, reorder cycles, waste levels, and service mix changes.

Revenue vs. product cost

Formula and shade demand

Inventory velocity

Waste and over-mixing

Who Buys This Intelligence

Global distributors

Distributors selling into the US and Europe need earlier demand signals: what salons consume, what is trending, and where stock should move.

Hair-care and colour brands

Brands need SKU-level consumption, formula trends, competitive share signals, and product performance insights from real salon usage.

Market-data buyers

Research firms, data marketplaces, investors, and category analysts pay for clean, aggregated market signals with geography and trend depth.

Salon operators

Owners get the immediate product value first: margin visibility, automated ordering, waste reduction, and smarter pricing decisions.

Data monetisation thesis

The same dataset that makes salons more profitable can become a second revenue engine: aggregated and de-identified benchmarks, demand signals, trend reports, and forecasting products for distributors, brands, and market-data buyers across the US, Europe, and global supply chains.

Trust principle: customer value first. Any market intelligence should be aggregated, de-identified, and permissioned; Spectra should not sell personal client data or expose identifiable salon performance.
